

Smoke Alarm Instructions

Recommended Placement:

1. One smoke detector on each floor
2. One in each sleeping area
3. Placed every 21ft of hallways and rooms
4. Within 10ft of all bedroom doors
5. For maximum, protection, place a smoke detector in every room (except kitchens and bathrooms).

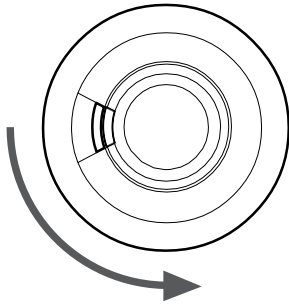

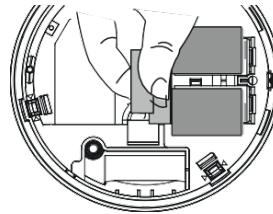

Avoid:

1. Bathrooms, kitchens, closets, garages, attics
2. Dusty or dirty areas
3. Insect infested areas
4. Extreme heat or cold
5. HVAC vent/return (place at least 6 ft away)

Mount the Device to the Ceiling

1. Remove the mounting plate.
2. Screw it to ceiling.
3. Pull the battery tab.

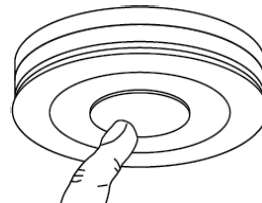

4. Carefully line up the smoke detector on to the mounting plate. Gently press and twist clockwise.

Test the Device

5. Press and hold the Test Button until the smoke detector sounds and the red light flashes. The alarm will stop shortly after the button is released.

WARNING: Do not test with flame.

If you purchase a Self-install system that includes smoke detectors, or if you add smoke detectors or carbon monoxide detectors at a later time, there may be specific requirements or standards for the installation and location of such detectors. You should contact your local authority having jurisdiction or consider having an EMC Security installer to assist in the installation, maintenance and location of such detectors. You have sole responsibility for complying with any and all codes, laws and standards that may apply to the installation, placement, and maintenance of the System.
