- ADA Doorbells

Increase Comfort - Enhance Security - Lower Costs

An EMC Security integrated solution will enable you to manage a single building, an entire complex, or complete global operations with a clear view of real-time events, efficient prevention of incidents, and insightful decision making.

Custom designed by EMC Security engineers | Scalable solutions | High quality service with competitive rates | On-time and on budget

ABOUT US

EMC Security is dedicated to providing security systems and automation throughout the state of Georgia. We have proudly provided service to over 100,000 homes and businesses since our inception in 1998.

We believe everyone should feel safe, whether at home, work, or school, so we keep costs down and don't require monitoring contracts.

Using advanced, scalable, non-proprietary technology, we strive to design a custom solution that will enhance safety and simplify security management without sacrificing the comfort of those that live and work at the complex.

Exclusive Secure Path™ Technology

This unique monitoring service architecture is the only one in Atlanta that is fully redundant, with customers being monitored 24 hours a day, 7 days per week from multiple centers, simultaneously. Should anything happen to one monitoring center, the other monitoring centers continue to monitor seamlessly without any interruption or down-time.

EMC Text-Alert

Free notification and response option. After an alarm is triggered, everyone on the emergency contact list will receive a group text notification by the central station operator. Everyone can then chat together in the group message. If someone knows what's going on, he or she can respond appropriately right from their mobile device: Dispatch or Dismiss.

Reduce false alarms, receive help faster than ever, and make better decisions, at no extra cost!
